The Durham Bull Athletic Park located in downtown Durham opened in 1995. One of the many projects over the last 15 years was the concrete restoration of the second floor slab of the stadium. The construction is a metal pan requiring a breathable coating.

All cracks and horizontal to vertical transitions were detailed, and then coated with the Strongcote SC-111 Pedestrian Traffic Deck Membrane. A color topping of Resicolor #4 was incorporated into the system to provide a monolithic color and promote ease of cleaning.
